MRN:	0428971	Procedure date:	15/07/2018

---

Procedure:	Left Femoral popliteal Bypass Graft
Pre-op diagnosis:	Peripheral vascular disease. Blocked left superficial femoral artery.
Surgeon:	Dr Leonardo Franchesca
Assistant:	Dr Ezra Goldberg (Surgical registrar)

---

**Operation details:**

Longitudinal oblique incision from femoral ring to mid-calf was made. Long saphenous vein was identified and ligated at the femoral ring. Long saphenous vein was traced and tributaries clipped and resected. Separated vein was tested for leaks and patency with normal saline.

Superficial femoral artery was exposed at mid-thigh and popliteal fossa. Reverse saphenous vein was grafted to SFA and popliteal artery using double needled Prolene.

Vascular bypass was observed for leakage and haemostasis achieved.

Skin closed with interrupted nylon.
