
Patient Name:	Karen Watson	Date of Birth:	22/03/1970
MRN:	0407123	Procedure date:	24/05/2018

Procedure:	Emergency laparotomy, bile duct repair and washout.
Pre-op diagnosis:	Bile leak post cholecystectomy
Surgeon:	Dr Mark Crozier
Assistant:	Dr Benjamin Johnstone (Surgical registrar)

Operation details:

Midline supra umbilical incision made. Peritoneal cavity was opened into. Free bile in the peritoneal cavity was observed. Bowel was non-inflamed. Free bile was sucked out and operation field was identified. Cystic stump was identified and the biliary leak was repaired. No intraoperative cholangiogram was performed.

Peritoneal cavity was washed with warm normal saline and haemostasis achieved. Drain inserted and routine closure done. Rectus sutured with nylon and skin sutured with interrupted nylon.
