

Abdominal CT report

DATE: 24 / 05 / 2018
PATIENT: Karen Watson
DOB: 22 Mar 1970

PAGE:
REF:

CLINICAL NOTES:

Day 4 post Lap chole with worsening abdominal pain. Peritonism on examination. ?cause

DIAGNOSIS:

There is low-attenuation fluid collection tracking superiorly in a perihepatic distribution and inferiorly along the right paracolic gutter. The adjacent peritoneum appears to have abnormal enhancement. This is congruent to a bile leak with bile peritonism.
