Dear Doctor,

Re: Mr Ronald Wattle

Thank you for accepting to seeing Mr Wattle. He is a 72-year-old retired mechanic who was found to have a palpable abdominal aortic aneurysm on palpation. This was confirmed on an abdominal ultrasound scan on 26 April. The USS showed a 5.7cm infrarenal AAA that did not involve the common iliac arteries.

I would like to refer him on to you for further investigation and possible management of his AAA please.

Kind regards,

Keith Logan
