

## Abdominal ultrasound report

DATE: 26 / 04 / 2018  
PATIENT: Ronald Wattle  
DOB: 27 May 1946

PAGE:  
REF:

**CLINICAL NOTES:**

Pulsatile and expansile central abdominal mass. ? AAA

**DIAGNOSIS:**

The abdominal ultrasound scan revealed an infrarenal abdominal aortic aneurysm extending just above the aortic bifurcation and measuring 5.7cm in diameter. The lumen was 2.5 x 2.5cm while the rest of aneurism was filled by thrombus. Aortic wall was not calcified. There was no free fluid surrounding the aneurysm.
